EDUCATION

Bachelor of Computer Science | Vishwakarma Institute of Technology *Expected June 2028*

- Cumulative GPA (till 4th semester): 9.05

PROJECTS

SchedCP - Adaptive Linux CPU Scheduler | C, eBPF, Rust, Python, Linux ***In Progress · October 2026–Present*** **· GitHub**

- Developing custom Linux CPU scheduling policies using `sched_ext` and eBPF, with the goal of dynamically switching scheduling behaviour without rebuilding the kernel.
- Building a Rust-based control service and Python benchmarking tools to load scheduling policies, run workloads, and collect performance metrics.
- Evaluating scheduling behaviour against the default Linux scheduler using metrics such as context switches, CPU migrations, and workload execution time.

MOS — C++ Operating System Project | C++ **GitHub**

- Collaborated on a C++ project simulating simplified CPU and memory behaviour to explore fundamental operating-system concepts.
- Implemented command-driven operations, including GD, PD, SR, and LR, to interact with and control the simulated system.
- Developed a hands-on understanding of low-level execution and memory operations through a simplified system model.

Academic Quartermaster | Link Link2

- Backend Architecture: Engineered a Multi-Agent Cognitive Architecture using the Google Agent Development Kit (ADK) and FastAPI, orchestrating specialized sub-agents for research retrieval and task automation.
- API Deployment: Containerized the backend using Docker and deployed it to Google Cloud Run (asia-south1), implementing a robust REST API capable of handling asynchronous tool-calling and session management.
- Intelligent Orchestration: Leveraged Model Context Protocol (MCP) via Zapier to bridge Gemini 2.5 Flash with third-party productivity suites including Notion, Google Calendar, Google Tasks, and Gmail.
- Data Persistence: Implemented a persistent SQLite3 knowledge base (The Librarian) to enable RAG-like search across projects.

EXPERIENCE

Open Source Contributor | *ECSoC (Elite Coders)* ***June – August 2026***

- Selected as an open-source contributor to collaborate on community-driven repositories, participating in code reviews and submitting PRs using Git/GitHub workflows.

Branding Executive | Abhivriddhi: Student Development Committee *September 2025 – May 2026*

- **Domain Management:** Oversee and coordinate four technical and creative domains: Website Development, Database Management, Graphic Design, and Video/Photography. Lead a multidisciplinary team to deliver digital assets and web solutions for university-wide events, streamlining workflows between designers and developers.
- **Full-Stack Oversight:** Manage the technical architecture and database integrity for club web projects, ensuring seamless integration between frontend design and backend functionality.

Awards and Fellowships:

- **1st Runner Up Globathon 2026 (FinTech Track):** Built **AdviceGuard**, an AI-powered wealth advisory copilot that combines portfolio-wide client risk triage with meeting intelligence to help financial advisors identify clients needing attention and convert conversations into evidence-backed, advisor-approved actions.
- **Internal Smart India Hackathon:** Ranked 6th among 364 teams in the college's internal selection round.
- **SheFi Scholar** | *SheFi [June 2026 – July 2026]*: Awarded a selective scholarship to undergo intensive hands-on training in Web3 infrastructure, decentralized finance (DeFi), smart contract security, and AI-native workflow

SKILLS and TECHNOLOGIES

• **Languages:** C++, Python, SQL	• **Systems:** Linux, operating-system fundamentals, process and thread management, memory management, concurrency

● **Software Development:** Google Cloud Run, REST APIs, Git, SQLite, React, Node.js, Streamlit, FastAPI	● **UI/UX & Graphic Design :** Figma, Canva, Affinity Designer, Capcut (video) portfolio here
